

## Unitrends UniView

UNIFY ON-PREMISES, SAAS, ENDPOINT AND CLOUD DATA PROTECTION

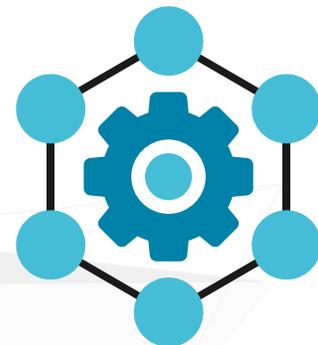

Unitrends UniView is a SaaS-based management platform that provides UI and API integration across Unitrends best-of-breed approaches to backup and recovery: Unitrends backup appliances, SaaS backup for Microsoft 365, Google Workspace and Salesforce, endpoint backup, and backup for public cloud workloads.

With UniView, you have one screen to manage BCDR in minutes per day, regardless of where your data lives. UniView is modular in design — simply start with what you need and easily snap in additional modules as needed. Do you have multiple locations, customers or tenants? Easily manage them all with one-screen simplicity in UniView.

## Innovation comes standard

UniView is the centralized management hub for Unitrends Unified Backup. Leverage UniView for time-saving automation, workflow integrations and streamlined management of all BCDR modules.

## With UniView, you'll benefit from:

### BackupIQ

BackupIQ is our intelligent alerting engine, enabling you to set thresholds to prioritize alerts for issues that directly impact your recovery SLAs, such as skipped backups or replication.

### Helix

Helix is a SaaS-based engine that automates remediation of environmental issues (such as VSS) before they impact backups. Designed to identify and fix common backup issues, Helix heals your environment without you lifting a finger.

### Backup policy creation

Manage backup policies directly in UniView for assets protected by your Unitrends appliances. Easily configure policies based on backup frequency; the appliance automatically initiates backups to meet the schedule you set.

### Integration hub

UniView provides you with a central location to manage workflow integrations between Unitrends and other Kaseya products, including KaseyaOne, Kaseya VSA and BMS, IT Glue, Autotask and more.

## How UniView Works

IT professionals are tasked with managing complex environments, with assets sprawled across on-premises, SaaS applications, endpoints and public clouds. UniView offers a fresh, holistic approach to managing backup data living across multiple platforms.

### Manage multiple appliances

Centralized management with Unitrends UniView enables you to manage multiple **Recovery Series** physical appliances and **Unitrends Backup** virtual appliances from one portal. UniView brings time-saving functionality so IT admins can move quickly. Prioritize issues with BackupIQ rule-based alerts, easily manage automatic updates and leverage environmental remediation with Helix — all from one place.

### Protect data on the go

Backing up of data in motion for your remote and on-the-go users requires a different strategy than an appliance, and UniView works with Unitrends direct-to-cloud backup solutions for seamless management on that front. Unitrends Endpoint Backup solutions require no local backup storage or infrastructure for simple, straightforward protection of **endpoints** and **remote servers**.

### SaaS backup made easy

SaaS data needs specialized protection, and UniView centralizes the management of your **Microsoft 365**, **Google Workspace** and **Salesforce** backups. Unitrends SaaS backup solutions are cloud-to-cloud backups purpose-built for their respective SaaS environments. Dark Web Monitoring is also available as part of Microsoft 365 and Google Workspace backup, which flags compromised or stolen employee credentials, enabling IT to take proactive steps to secure accounts before malicious activity occurs.

### Seamless management in a cloudy world

When you run workloads in the public cloud, you bear the same responsibilities for data protection as you do on-premises. **Unitrends Backup for Microsoft Azure** is a cloud-to-cloud backup and disaster recovery solution tailor-made for the business continuity of Microsoft Azure workloads. Manage protection and backup statuses for your Azure VMs directly in UniView.
